2022 Annual Drinking Water Quality Report

HECKER

IL1330150

Annual Water Quality Report for the period of January 1 to December 31, 2022

This report is intended to provide you with important information about your drinking water and the efforts made by the water system to provide safe drinking water.

The source of drinking water used by HECKER is Purchased Surface Water

For more information regarding this report contact:

Este informe contiene información muy importante sobre el aqua que usted bebe. Tradúzcalo ó hable con alguien que lo entienda bien.

Source of Drinking Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over poses a health risk. More information about the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water contaminants and potential health effects can be obtained by calling the EPAs Safe Drinking Water Hotline at (800) 426-4791.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population.

Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to

minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Source Water Assessment

We want our valued customers to be informed about their water quality. If you would like to learn more, please feel welcome to attend any of our regularly scheduled meetings. The source water assessment for our supply has been completed by the Illinois EPA. If you would like a copy of this information, please stop by City Hall or call our water operator at 618-539-5541. To view a summary version of the completed Source Water Assessments, including: Importance of Source Water; Susceptibility to Contamination Determination; and documentation/recommendation of Source Water Protection Efforts, you may access the Illinois EPA website at http://www.epa.state.il.us/cgi-bin/wp/swap-fact-sheets.pl.

Source of Water: S L M WATER COMMISSION Illinois EPA considers all surface water sources of community water supply to be susceptible to potential pollution problems, hence, the reason for mandatory treatment for all surface water supplies in Illinois. Mandatory treatment includes coagulation, sedimentation, filtration, and disinfection. Primary sources of pollution in Illinois lakes can include agricultural runoff, land disposal (septic systems) and shoreline erosion.

Lead and Copper

Action Level Goal (ALG): The level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety. Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Action Level: The	Date Sampled	MCLG	Action Level (AL)		# Sites Over AL	Units		Likely Source of Contamination
Copper	09/24/2019	1.3	1.3	0.46	0	ppm	N	Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems.
Lead	09/24/2019	0	15	5.7	0	ppb	N	Corrosion of household plumbing systems; Erosion of natural deposits.

Water Quality Test Results

The following tables contain scientific terms and measures, some of which may require explanation. Definitions:

Regulatory compliance with some MCLs are based on running annual average of monthly samples. Ava:

A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total Level 1 Assessment: coliform bacteria have been found in our water system.

A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple Level 2 Assessment:

occasions.

The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using Maximum Contaminant Level or MCL:

the best available treatment technology.

Maximum Contaminant Level Goal or MCLG: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for

a margin of safety.

The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant Maximum residual disinfectant level or is necessary for control of microbial contaminants.

Maximum residual disinfectant level goal The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants. or MRDLG:

Water Quality Test Results

na: not applicable.

mrem: millirems per year (a measure of radiation absorbed by the body)

ppb: micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.

ppm: milligrams per liter or parts per million - or one ounce in 7,350 gallons of water.

Treatment Technique or TT: A required process intended to reduce the level of a contaminant in drinking water.

Regulated Contaminants

egulated Contaminar	nts						Wielstien	Likely Source of Contamination
Disinfectants and Disinfection By-Products	Collection Date	Highest Level F Detected	Range of Levels Detected	MCLG	MCL	Units	VIOTACION	HIROLY COULDS OF THE PROPERTY
Chlorine	12/31/2022	0.3	0 - 0.86	MRDLG = 4	MRDL = 4	ppm	И	Water additive used to control microbes.
Haloacetic Acids (HAA5)	2022	28	0 - 41	No goal for the total	60	ppb	N	By-product of drinking water disinfection
Total Trihalomethanes	2022	54	34 - 91	No goal for the total	80	ppb	N	By-product of drinking water disinfection

Lead and Copper

Action Level Goal (ALG): The level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety. Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Lead and Copper	Date Sampled	MCLG	Action Level (AL)	90th Percentile	# Sites Over AL	Units	Violation	Likely Source of Contamination
Copper	2022	1.3	1.3	0.091	0	ppm	N	Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems.
Lead	2022	0	15	4.75	0	ppb	N	Corrosion of household plumbing systems; Erosion of natural deposits.

Regulated Contaminants

isinfectants and isinfection y-Products	Collection Date	Highest Level R Detected	Range of Levels Detected	MCLG	MCL	Units		Likely Source of Contamination
hloramines	12/31/2022	3.1	2.6 - 3.5	MRDLG = 4	MRDL = 4	ppm	N	Water additive used to control microbes.
aloacetic Acids	2022	41	32.6 - 52	No goal for the total	60	ppb	N	By-product of drinking water disinfection.
HAA5)					_	1_	N	By-product of drinking water disinfection.
Total Trihalomethanes	2022	57	42.5 - 67.2	No goal for the total	80	ppb	IN	By-product of differences
Inorganic Contaminants	Collection Date	Highest Level :	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Arsenic	2022	1	1.42 - 1.42	0	10	ppb	N	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes.
Barium	2022	0.0412	0.0412 - 0.0412	2 2	2	ppm	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
Fluoride	2022	0.9	0.85 - 0.85	4	4.0	ppm	N	Erosion of natural deposits; Water additive whi promotes strong teeth; Discharge from fertiliz and aluminum factories.
Nitrate [measured as Nitrogen]	2022	1	0.97 - 0.97	10	10	ppm	N	Runoff from fertilizer use; Leaching from sep tanks, sewage; Erosion of natural deposits.
Sodium	2022	14	14.2 - 14.2			ppm	N	Erosion from naturally occuring deposits. Unin water softener regeneration.
Radioactive	Collection Date	n Highest Level Detected	l Range of Levels	ls MCLG	MCL	Units	Violation	n Likely Source of Contamination

Combined Radium 226/228	08/02/2021	0.75	0.75 - 0.75	0	5	pCi/L	N	Erosion of natural deposits.
Gross alpha excluding radon and uranium	08/02/2021	0.63	0.63 - 0.63	0	15	pCi/L	N	Erosion of natural deposits.
Synthetic organic contaminants including	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
pesticides and herbicides Atrazine	2022	0.42	0 - 0.42	3	3	ppb	N	Runoff from herbicide used on row crops.
Simazine	2022	0.82	0 - 0.82	4	4	ppb	N	Herbicide runoff.
		·						

Turbidity

	Limit (Treatment Technique)	Level Detected	Violation	Likely Source of Contamination
Highest single measurement	1 NTU	0.11 NTU	N	Soil runoff.
Lowest monthly % meeting limit	0.15 NTU	100%	N	Soil runoff.
				distinctor of water of

Information Statement: Turbidity is a measurement of the cloudiness of the water caused by suspended particles. We monitor it because it is a good indicator of water quantum statement. and the effectiveness of our filtration system and disinfectants.

Total Organic Carbon

The percentage of Total Organic Carbon (TOC) removal was measured each month and the system met all TOC removal requirements set, unless a TOC violation is noted in the violations section.

Violations Table

Lead and Copper Rule

The Lead and Copper Rule protects	public health by	minimizing lead	and copper levels in drinking water, primarily by reducing water corrosivity. Lead and
Violation Type	Violation Begin	Violation End	Violation Explanation
FOLLOW-UP OR ROUTINE TAP M/R (LCR)	10/01/2022	2022	We failed to test our drinking water for the contaminant and period indicated. Because of this failure, we cannot be sure of the quality of our drinking water during the period indicated.

Monitoring Violations Annual Notice Template

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Monitoring Requirements Not Met for HECKER

Our water system violated several drinking water standards over the past year. Even though these were not emergencies, as our customers, you have a right to know what happened and what we did to correct these situations.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During 6/1 TO 9/30/21 we did not monitor or test for Lead and Copper and therefore cannot be sure of the quality of our drinking water during that time.

What should I do?

There is nothing you need to do at this time.

The table below lists the contaminant(s) we did not properly test for during the last year, how often we are supposed to sample for these contaminants, how many samples we are supposed to take, how many samples we took, when samples should have been taken, and the date on which follow-up samples were (or will be) taken.

Contaminant	Required sampling frequency	Number of samples taken	When all samples should have been taken	When samples were or will be taken
Lead and Copper	1/3 years	0	6/1 to 9/30/22	6/1 to 9/30/23

What happened? What is being done?

We failed to collect the lead and copper samples. Samples will be collected 6/1 to 9/30/23

For more information, please contact Chad Rhutasel, at 618-539-5541 or hydroservicesinc@sbcglobal.net

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by the Village of Water System ID# IL1330150 Date distributed 6/30/23 Hecker
