

Boil Orders

**Boil Water
Notice**

THE GOOD AND THE BAD

What is a Boil Order?

- ▶ A Boil Order is a notice to potentially affected customers advising them to boil water prior to using for any drinking or culinary purposes.
- ▶ The Boil Order must be issued by Public Water Supply official(s).
- ▶ Boil Orders typically issued when microbial contamination is present –or- conditions are present for suspected microbial contamination.

When a Boil Order should be considered

- ▶ When bacteriological sampling indicates the persistent presence of contamination.
 - ▶ If presence is indicated by routine coliform monitoring, repeat samples should be taken first, unless initial sampling indicates multiple positive samples and wide-spread contamination. Positive e-coli samples may require additional consideration.
 - ▶ Important to remember that boil order samples cannot be used as routine samples (Best reason not to wait until the end of the month to take routine samples) .

When a Boil Order should be considered (cont'd)

- ▶ Repair or maintenance of a finished water storage tank that cannot be isolated when intrusion of the tank is required.
- ▶ Any major disruption within the treatment scheme that causes a compromised disinfection practice or particulate removal.
- ▶ When turbidities exceed 1.0 NTU in the finished water.
- ▶ When system pressure has dropped below 20 psi for an extended period whether it is localized or system-wide. Exceptions may apply.

When a Boil Order should be considered (cont'd)

- ▶ Surface water has entered wells and/or finished water storage tanks.
- ▶ The disinfectant contact time (CT) has been reduced due to changes in treatment and/or clearwell maintenance.
- ▶ Distribution water quality has changed significantly with indicators being turbid, discolor, odor, etc.
- ▶ Any other suspicion that bacterial contamination may be present.

Types of Boil Orders

- ▶ System-Wide Order
- ▶ Localized Boil Order
 - ▶ Typically used for distribution maintenance and repair (water main break, localized pressure loss, water main replacement, etc.)

Who Should Be Notified When a Boil Order is Issued?

- ▶ All affected customer must be advised of the boil order as soon as possible.
- ▶ Appropriate IEPA Regional Office (discussion regarding corrective actions and sampling requirements). After hours or weekends: contact Illinois Emergency Management Agency at 1-800-782-7860.
- ▶ County and/or local health department.

How Should Customer Notification Be Distributed?

- ▶ Exhaustive efforts should be taken to notify all customers that are affected. Notification delivery methods may vary depending on the size of population affected and may require multiple delivery methods.
 - ▶ Local radio and television station
 - ▶ Hand delivery (door hangers)
 - ▶ Road Signs
 - ▶ Postings at conspicuous locations (post office, library, city hall, etc.)
 - ▶ Telephone (reverse 911)
 - ▶ Email/Texting

What should be included in the Boil Order Notification?

- ▶ Effective Date and Time
- ▶ Affected Area
- ▶ Public Water Supply Contact information
- ▶ Actions to be taken by customer (5-minute rolling boil for consumption and culinary purposes)
- ▶ Notification procedure for Boil Order termination

Boil Order Sampling

- ▶ Specific sampling instructions should be given by the appropriate IEPA Regional Office.
- ▶ Boil Order samples can be analyzed using any presence/absence method.
- ▶ One set of satisfactory samples: during instance of pressure drop and remediation has occurred.
- ▶ Two sets of satisfactory samples: when persistent contamination is evident as a result of flooding or previous confirmed sample results.

Boil Order Considerations

- ▶ Remember – the boil order is issued by the system and should be used as a tool to protect public health
- ▶ While boil orders can be a pain, they are an effective way to protect your system from liabilities. Better safe than sorry.
- ▶ Stuff happens. Don't be afraid to issue a boil order when suspected contamination may be present and the boil order is warranted.

Boil Order Considerations (cont'd)

- ▶ Boil orders are not to be issued in all circumstances where discoloration and/or turbid problems exist (i.e. nitrates, metals, etc).
- ▶ Be prepared for issuing boil orders and have the door hangars, signs, appropriate telephone numbers on hand.
- ▶ Make Boil Order procedures part of your Emergency Operations Planning
- ▶ DO NOT PUT A SUNSET OF THE BOIL ORDER WHEN ISSUING THE NOTIFICATION !!!

Are Boil Orders a Regulatory Requirement?

- ▶ Heck YES:
- ▶ 35 IAC 604.135 outlines requirements for issuing boil orders and boil order notifications.

Boil Order/Crisis Communication:

Some advice related to public and media interaction

Types of Water Emergencies:

- ▶ Boil Orders
- ▶ Watermain Breaks
- ▶ Power Outages (weather related or accidental)
- ▶ Failure of water storage tanks or pumping equipment
- ▶ Treatment Plant failure
- ▶ Supply chain / chemical shortages
- ▶ Detection of water contaminants
- ▶ Security breaches
- ▶ Weather related disasters

may be ringing a lot:

Three Things People Want to Know During a Crisis:

- ▶ WHAT HAPPENED?
- ▶ WHAT DOES IT MEAN TO ME?
- ▶ WHAT ARE YOU DOING ABOUT IT?

Do's and Don't's of Communicating During Crisis: What to Do

- ▶ Take your time
- ▶ Think before you answer
- ▶ Say if you don't know
- ▶ Stick to facts
- ▶ Say if you can't answer and explain why
- ▶ Stay in your area of expertise or stick to talking points
- ▶ Assume everything is on record and is being recorded
- ▶ Maintain eye contact – project confidence
- ▶ Be firm, fair and 100% honest
- ▶ **BE PROFESSIONAL !!!!!**

| Parody about pumping up one's confidence

Do's and Dont's of Communicating During Crisis: What not to do:

- ▶ Lie, guess, or speculate
- ▶ Get upset or angry
- ▶ Use acronyms or jargon
- ▶ Talk about protected information
- ▶ Talk about information outside your expertise
- ▶ Repeat negative words from questions
- ▶ Play favorites with customers or reporters - be consistent with your message
- ▶ Do not say “no comment”
- ▶ Do not introduce new issues or subjects

Situations to Avoid with Good Communication

Water Utility Communication During Emergency Response

When disaster strikes, communicating the issues and their consequences to your customers and response partners is crucial. Because communities depend on well-functioning water systems, this is especially true for water and wastewater utilities.
